Dry-type transformer

干式变压器

Epoxy resin cast dry type transformer 环氧树脂浇注干式变压器

► Overview 概述

Our company can produce a variety of epoxy resin casting transformers high voltage up to 35kV and capacity up to 6300KVA. The variety includes SC10, SCB10 series and SC11, SCB11 series SC(B)12-SC(B)15 series. The product is widely used in power transmission and transformation systems, such as hotels, restaurants, airports, high-rise buildings, commercial centers, residential quarters and other important places, as well as subways, smelting power plants and other harsh environments.

我公司可生产电压等级 35kV 以下，容量为 6300KVA 以下的系列品种环氧树脂浇注变压器，品种包括 SC10、SCB10 系列以及 SC11、SCB11 系列、SC(B)12-SC(B)15 系列产品，该产品广泛应用于输变电系统，如宾馆饭店、机场、高层建筑、商业中心，住宅小区等重要场所，以及地铁、冶炼电厂等环境恶劣场所。

► Implementation standards 执行标准

Features 特点

- + Low consumption, energy saving, low noise, no maintenance, no pollution and can be directly installed in the load center;
低耗节能、噪音低、免维护、无污染，可直接安装在负荷中心；
- + Strong resistance to short circuit, low partial discharge, high reliability;
抗短路能力强、局部放电量低、可靠性高；
- + Strong cooling capacity, can be operated under 140% rated load in the condition of forced air cooling;
散热能力强，在强迫风冷条件下可以在 140% 额定负载下运行；
- + Corrosion resistance, moisture resistance, flame retardant, fireproof, can be operated in high humidity and other harsh environments;
耐腐蚀、耐潮、难燃、防火，可在高湿度和其他恶劣环境中运行；
- + Equipped with intelligent temperature controller, which can be monitored and controlled centrally to ensure the reliable operation of the transformer.
配有智能温控仪，可以集中监视和控制，为变压器可靠运行提供保证。

SC(B)10, SC(B)11-30~4000/10

series dry type transformer

SC(B)10, SC(B)11-30~4000/10 系列干式变压器

► Overview 概述

With filler thin insulation and coil encapsulated by epoxy resin, this series of dry type transformers is flame-retardant, fireproof, explosion-proof, free from maintenance and no pollution and it is compacted and can be installed at load center. Besides, with scientific and reasonable design and coating craftwork, it has advantages of low partial discharge capacity, low noise and good heat dispersion. It can run for a long time with 140% rated load in the circumstance of forced air cooling. It is also equipped with an intelligent temperature controller to conduct centralized monitoring and control.

该系列带填料薄绝缘干式变压器，由于线圈被环氧树脂包封，所以难燃、防火、防爆、免维护、无污染、体积小，可直接安装在负荷中心。同时科学合理的设计和浇注工艺，使产品局部放电量更小、噪声低、散热能力强，在强迫风冷条件下可以在 140% 额定负载下长期运行，并配有智能温控仪，可以集中监视和控制。

SC(B)10-30~5000/20
series dry type transformer
SC(B)10-30~5000/20 系列干式变压器

Features 特点

- + Safe, flame retardant, pollution-free, and available to be installed directly in the load center;
安全、阻燃、无污染，可直接安装在负荷中心；
- + Maintenance-free, easy to install and low integrated operation cost;
免维护，安装方便，集成运行成本低；
- + It has good moisture-proof performance and can operate normally under 100% humidity;
具有良好的防潮性能，可在 100% 湿度下正常运行；
- + Low loss, low partial discharge, low noise, strong cooling ability, and 150% rated load operation under forced air cooling conditions;
低损耗、低局部放电、低噪音、冷却能力强，强制风冷条件下可 150% 额定负载运行；
- + It is equipped with perfect temperature protection control system to provide reliable guarantee for transformer safe operation;
配备完善的温度保护控制系统，为变压器安全运行提供可靠保障；
- + High reliability. According to the operation research of the products that have been put into operation, the reliability index of the products has reached the international advanced level;
可靠性高。根据已投运产品的运行研究，产品的可靠性指标已达到国际先进水平；
- + The transformer adopts BWDK series signal thermometer. The temperature measuring element is embedded in the upper part of the low-voltage coil. It can automatically detect and display the working temperature of the phase coil, and has the functions of over-temperature alarm and trip.
变压器采用 BWDK 系列信号温度计。测温元件嵌在低压线圈的上部，可自动检测并显示相线圈的工作温度，并具有超温报警和跳闸功能；

- Low voltage winding is made of pure cooper (or aluminum) foil and manufactured on special low voltage foil winding machine, with turn insulation of class F. Foil coil can solve the problems of low voltage, high short-circuit stress of high current coil winding products, ampere-turn imbalance, poor heat dissipation effect, large spiral angle of winding, unstable quality of manual welding and so on. At the same time, the winding end of our company adopts resin for sealing, solidification, moisture-proof and anti-fouling. Copper bars are welded automatically by argon arc welding.
- 低压绕组采用全铜（铝）箔绕制，匝绝缘为F级，在专用低压箔绕机上绕制。箔式线圈可解决电压低、大电流线圈绕制产品短路应力高、安匝不平衡、散热效果差、绕制螺旋角大、手工焊接质量不稳定等问题。同时本公司绕组端部采用树脂密封、固化、防潮、防污，铜排采用氩弧焊自动焊接。

SC(B)10-30~6300/35
series dry type transformer
SC(B)10-30~6300/35 系列干式变压器

Features 特点

+ The series of dry type transformers is used to directly reduce the 35kV grid power supply to 400V distribution power supply for users. Remove 10kV power transmission and transformation, significantly reduce operating costs, reduce multi-level power transformation project construction, and have significant social benefit. The product has improved the distribution of inter-layer voltage and capacitance by optimizing the high voltage coil structure, which greatly improves the product's ability to withstand the impact of atmospheric overvoltage and operational overvoltage, and also improves the distribution of electric field, which further reduces the product's partial discharge.

该系列干式变压器用于将 35kV 电网电源直接降为 400V 配电电源为用户供电，减少 10kV 输变电环节，使运行费用明显降低，减少多级变电工程建设，具有显著的社会效益。该产品通过优化高压线圈结构，改善了层间电压和电容的分布，大大提高了产品耐受大气过电压和操作过电压的冲击能力，同时也改善了电场分布，使产品局放量进一步降低。

SC(B)H15-100~2500/10 series of amorphous dry type transformer SC(B)H15-100~2500/10 系列非晶合金干式变压器

► Features 特点

The iron core of amorphous alloy transformers is made of amorphous alloy. Amorphous alloy materials have a disordered amorphous state of the metal atoms and a lower loss than the silicon steel core, achieving high efficiency and energy saving. The area enclosed by the hysteresis loop of the amorphous alloy is much smaller than that of the cold rolled steel sheet, so the hysteresis loss of the amorphous alloy is much smaller than that of the cold rolled silicon steel sheet and its core loss is very low about 70% lower than the no-load loss of traditional silicon steel sheet iron core transformers. Amorphous alloy transformer is an ideal low-loss and energy-saving transformer. Due to low loss, amorphous alloy transformers generate less heat, have low temperature rise, and have very stable performance.

非晶合金变压器是用非晶合金制作铁芯的变压器。非晶合金材料的金属原子排列呈无序非晶状态，较硅钢材料铁芯损耗降低，达到高效节能效果。非晶合金的磁滞回线所包围的面积远远小于冷轧钢片，因此非晶合金的磁滞损耗比冷轧硅钢片的小很多，其铁芯损耗非常低，比传统硅钢片铁芯变压器的空载损耗低 70% 左右，是目前非常理想的低损耗节能变压器。由于损耗低，非晶合金变压器发热少、温升低，运行性能非常稳定。

SC(B)10-30~2500/20(10)

dry type transformer

SC(B)10-30~2500/20(10) 20kV 和 10kV 转换干式变压器

Features 特点

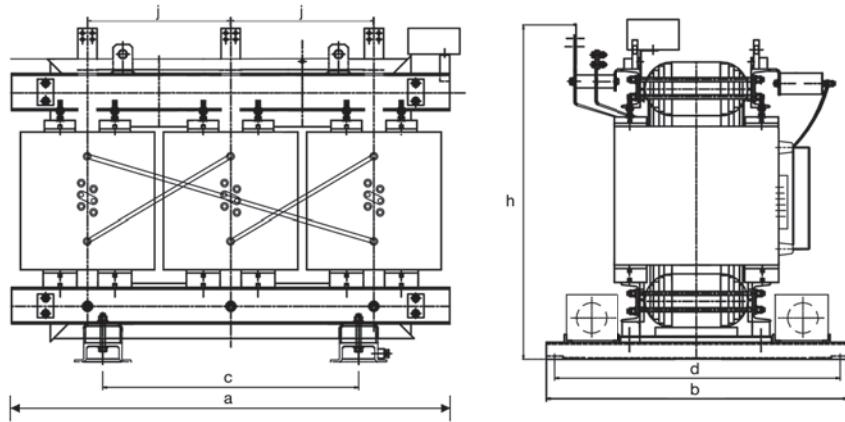

- When this series of dry type transformers is connected to a grid voltage of 20kV or 10kV, the connection state between two windings of each phase high voltage coil is controlled by a conversion device, achieving the purpose of voltage conversion by series or parallel connection, while keeping the output voltage constant. Thus, one transformer can be connected to two voltage systems of 10kv and 20kv non-simultaneously. It can reduce the repetitive investment but convenient and quick conversion and also has stable product performance.

该系列干式变压器在网上电压20kv或10kv时,通过转换装置控制每相高压线圈两段绕组之间的连接状态,串联或并联达到电压转换的目的,而输出电压不变,从而实现一台变压器产品可非同时接至10kv、20kv级两种电压系统。减少了重复投资,而且转换方便快捷,产品性能稳定。

Energy efficiency grade II

dry type transformer

能效二级干式变压器

► Overview 概述

We adopt domestic advanced technology and design and produce in strict accordance with the relevant standards for energy-saving dry type transformers in GB20052-2020. The products have the advantages of strong short-circuit resistance, convenient maintenance, small size, small footprint, and low noise. Ideal for factories, hospitals, tunnels, airports, power stations, etc.

我公司采用国内先进技术，严格按照 GB20052-2020 中关于节能型干式变压器的相关标准进行设计和生产，产品具有抗短路能力强，维护方便，体积小，占地少，噪音低等优点，是工厂、医院、隧道、机场、电站等的理想之选。

Energy efficiency grade I

dry type transformer

能效一级干式变压器

▶ Overview 概述

Compared with energy efficiency level II products, the energy efficiency level I has more obvious advantages in terms of performance. The no-load loss is reduced by about 20% on average, and it is safe and fireproof. It can be directly operated in high-load power-consuming places. It is an ideal choice for factories, hospitals, tunnels, airports, powerstations and so on.

能效一级相较于能效二级产品，在性能方面具有更明显的优势，其中空载损耗平均下降约 20%，且安全防火，可直接运行于高负荷用电场所，是工厂、医院、隧道、机场、电站等的理想之选。

Traction rectifier transformer

牵引整流变

▶ Overview 概述

The traction rectifier transformer is to transmit the electric energy of the three-phase power system to two single-phase traction lines with respective loads. The two single-phase traction lines supply power to the up and down locomotives respectively, which are widely used in urban traffic, inter-city express trains, mine transport vehicles, etc. The rectifier unit provides traction DC power for them. The rectifier unit is usually composed of a traction rectifier transformer and a rectifier, which mainly adjusts the AC voltage on the grid side to the required DC voltage on the valve side to supply power to the load. The traction rectifier units currently on the market are usually 12-pulse and 24-pulse. Our company has been able to manufacture traction rectifier transformer products with superior performance.

牵引整流变压器是将三相电力系统的电能传输给两个各自带负载的单相牵引线路。两个单相牵引线路分别给上下行机车供电，广泛应用于城市交通、城市间的快速列车、矿山运输车等，而整流机组为其提供了牵引直流电源。整流机组通常由牵引整流变压器和整流器组成，主要是将网侧交流电压调节成所需的阀侧直流电压来给负载供电。目前市面采用的牵引整流机组通常为12脉波和24脉波。我公司已完全能制造出性能优越的牵引整流变压器产品。

▶ Type description 型号说明

ZQ	S	C	(B)	—	□ / □		
						Voltage rating (kV)	电压等级 (kV)
						Rated capacity (kVA)	额定容量 (kVA)
						Low voltage foil coil	低压箔绕线圈
						Solid molding (epoxy casting)	固体成型 (环氧树脂浇注)
						Three-phase	三相
						Traction rectifier	牵引整流

Features 特点

Main functions of the traction rectifier transformer are:

牵引整流变压器主要功能为：

- + Reduce (or increase) the power supply voltage on the AC grid side to the AC valve side voltage that meets the output DC voltage requirements.
将交流网侧的电源电压降低（或升高）到满足输出直流电压要求的交流阀侧电压。
- + Realize the electrical isolation between the AC valve side and the grid side.
实现交流阀侧与网侧的电气隔离。
- + Convert the three-phase AC power on the AC grid side into multi-phase AC power on the AC valve side to reduce the harmonic content on the AC grid side and improve the DC voltage waveform. Due to the limitations of the use environment and the obvious advantages of dry type traction rectifier transformers, dry type traction rectifier transformers are widely used in subway traction substations, and oil immersed traction rectifier transformers can be used in harsh or outdoor environments.
将交流网侧的三相交流电源转换为交流阀侧的多相交流电能，以降低交流网侧的谐波含量及改善直流电压波形。由于使用环境的限制和干式牵引整流变压器的明显优势，干式牵引整流变压器大量应用在地铁牵引变电站中，油浸式牵引整流变压器可应用在环境较为恶劣或户外环境下。
